259-262) : R. HARTMAN and J. F. DASHIEL. - The present experiment employed the method of ranking relative abilities and relative interests in six simple forms of psychological tests. Tests used: Word Completion, Code Writing, Immediate Retention of Visual Impressions, Arithmetic Problem, Pitching Pennies, Letter Cancellation. The results are thought to have some significance in the light of two considerations: (a) the indirectness of the method of calculating the ranks in ability, and (b) the nature of the activities used, these being mostly paper and pencil tests of the traditional type and presumably not calculated to arouse as varied interests as would activities chosen from wider fields. *Tests of Discrimination and Multiple Choice for Vocational Diagnosis* (pp. 262-267) : DAGNY SUNNE. - The McComas multiple choice experiment was given to disabled soldiers who had also been given the army Alpha Test, the Pintner Cube Test, and the Healy Picture Completion Test II. The coefficients show that the Alpha test rating would have been unfair to some of the men if used as the basis for selecting vocational courses. *The Function of Psychology in the Rehabilitation of Disabled Soldiers* (pp. 267-290) : BIRD T. BALDWIN. - A report of the work done at the Walter Reed General Hospital, Takoma Park, D. C. *General Reviews and Summaries: Drugs*: A. T. POFFENBERGER. A review of eleven references on drugs. *Reading*: E. H. CAMERON. A review of the work of Breed and Wembridge and Means. *Reaction Time*: V. A. C. HENMON.
